The value received in the cleaning up should far out weight what little disturbance we cause. The total overall project included in the exploratory phase will be to improve the access road, extract 8,000 tons of tar sands from existing pits, haul by rock trucks the material to the bottom of the canyon, crush the material to 3/4 minus size, haul the material by belly dump trucks to Salt Lake Valley and process thru a pilot plant that is presently being designed.

It is imperative that we proceed as rapidly as possible on this phase. Our timing for using the crusher site has to be compatable to Kaisers Steels schedule for constructing their building. Therefore, we request that you act on the issue as soon as possible. If there is any question or additional information required please call.

Sincerely,

A handwritten signature in cursive script that reads "Thomas R. Kendrick".

Thomas R. Kendrick
